

From the Editor

Publication Date

This issue is the third of Volume 43 of *TS*, corresponding to July-September 2019. For the record, the issue was published in October, 2020.

About this issue

The main article of this issue of *TS* deals with risk strategy in thermal soaring – of course the risk of outlanding, which, perhaps, could be prevented by a “gear-shifting”. But is this the right decision? Read more in the following interesting article.

There is something new in the “look and feel” of *TS* articles: If you are reading the PDF on your computer, you will see small

colored boxes around links and references. These are clickable and you will be immediately redirected to the respective literature, section etc.. In case you prefer reading a hardcopy, boxes are invisible on the print out. And now enjoy!

Very Respectfully,

Arne Seitz

Editor-in-Chief, *Technical Soaring*
