

From the Editor

Publication Date

This issue is the first of Volume 45 of *TS*, corresponding to January-March 2021. For the record, the issue was published in November, 2021.

About this issue

The article in this issue of *TS* deals with the influence of air humidity on updrafts. To provide evidence, the authors chose an experimental approach and conducted their own flight tests. The experimental setup, measurement method, data acquisition and results are described in detail. However, their findings will

certainly lead to discussions and, hopefully, will also stimulate further experimental as well as theoretical research on this topic. Enjoy reading !

Very Respectfully,

Arne Seitz

Editor-in-Chief, *Technical Soaring*
