

The papers in this issue are from the 2003 AIAA Evolution of Flight

Symposium/Conference in Dayton, Ohio, celebrating the centennial of the Wright Brothers First Flight. They were presented in a special session on the history and future development of sailplanes, which was organized and moderated by Professor Fred Thomas, former director of DLR Braunschweig, and Professor Mark D. Maughmer of Penn State University. These papers are published in *Technical Soaring* with the kind permission of the American Institute of Aeronautics and Astronautics.
